**Description:**

**From the Author** The Market Technicians Association has selected this book as required reading in preparation for the final examination leading to a Chartered Market Technician's (CMT) professional accreditation. This book assumes you have charting skills equal to the CMT II examination level and provides no introductory or entry level background.

**From the Back Cover** In today's rapidly advancing technical environment, Technical Analysis for the Trading Professional is the groundbreaking book that presents dramatic new formulas and chart applications to improve market timing. Discover why interpreting oscillators between a range of 0 and 100 is a costly error. Benefit from the new Composite index that warns when the Relative Strength index is failing to detect a major trend reversal. Learn how to adjust conventional indicators for a market's natural growth and decay cycle for any trading time horizon. This fascinating book covers using intersecting trend lines as a timing tool, how internal price pivots can be used to define when market spikes should be filtered for calculating Fibonacci retracements, and how to use reverse engineering indicators for price projection. You'll learn to define asymmetrical cycles and discover how Gann and Fibonacci took two different routes to arrive at a common model and how you can apply their methods. Each chapter is a separate topic, building step-by-step through 150 charts that lead toward new methods of price triangulation. The result will allow you to pinpoint a market objective--even in the most extreme and volatile trading environment.
