Description:

From the Author This is an exciting time to be in the field of web development! My intent for this new 6th edition of Web Development and Design Foundations with HTML5 is to not only prepare students to design web pages that work in today's popular browsers but also prepare them to take advantage of new HTML5 coding techniques in the future. To meet this challenging goal, the book introduces both XHTML syntax and HTML5 syntax, presents coding web pages in HTML5 with

backwards-compatible techniques that work in current browsers, and also provides practice with HTML5's new features that will only work in the latest versions of browsers.

The approach of the book reflects my personal philosophy of teaching web development and emphasizes hands-on practice exercises. Case studies are included throughout the book to provide students an opportunity to apply their new skills. The textbook companion website at webdevfoundations.net has a page for each chapter with hyperlinks for websites listed in the book, information on emerging trends, additional examples, corrections, and review games. Student files are available at cssupport.pearsoncmg.com/book.php?author_id=47 . Instructor materials are available from the publisher's website.
